

Continuity Training Services

OpsCentre provides a range of classroom-based and online Business Continuity, IT Disaster Recovery, Emergency and Crisis Management training services.

Public Training Courses

In conjunction with Continuity Forum, OpsCentre delivers a number of public training courses, some of which are accredited by the Business Continuity Institute (BCI). These courses are run in most capital cities throughout Australia on a regular basis, are cost effective and are offered at discounted rates to Continuity Forum member organisations.

In-House Courses

For organisations with larger groups of staff, or requiring customised courseware to meet your own business or internal processes, in-house training is a better option. In-house training is most effective for at least six staff members or more.

Our team develops and delivers courses to suit your specific requirements, including reference your own products and services, risk profiles, service level targets and continuity planning strategy, plans, sites, teams and infrastructure.

We build tests, exercises and examinations and accredit staff to a variety of DR/BC standards, if required.

Online Training

Online training is a very cost effective option, particularly for diverse and geographically dispersed staff groups, and given it is 'always available online', it is beneficial as ongoing refresher training for new or existing staff. Integration of BC/ITDR into online staff induction training programs can also be provided.

We provide an online hosted training environment or can build courseware for delivery via your own preferred internal online training tool. Online training provides a rich learning experience combining text, video, audio, online testing, assessment and product / research information.

Deliverables

Training Deliverables include:

- Training Courseware
- Training Course Delivery
- Certification to local and international continuity standards
- Professional Assessment and Accreditation
